Мех. очистка в ливнепусках и дождеприемниках

HUBER System Solutions for Combined and Stormwater Treatment

Innovative combinations of mechanical treatment systems for combined and stormwater overflows

- Reduced investment and operating costs
- Sustainable environmental protection and improved water quality by means of preceding screens
- Maximum operating reliability due to proven technical system solutions

HUBER screens are used to retain debris and other coarse solids within the sewer systems and to prevent them from overflowing into receiving water bodies during storm events.

We have a variety of screens suitable for application at sewer overflows. For such applications bar screens and perforated plate screens can be selected. We offer screens that are installed upstream of, on top, or downstream of overflow weirs.

The optimally suited screen is selected depending on the required or desired capture rate, flow requirement and structural conditions. Our global presence and experience allows our experts to propose the best solution to any problem.
